- [illegible]

1. *Phylogenetic relationships*—The phylogenetic relationships among the 10 species of *Phrynosoma* were determined using the parsimony method of Farris (1993) with the program PAUP (ver. 4.0a; Farris, 1996). The analysis was based on 10 morphological characters (Table 1) that were coded as discrete characters with discrete states. The analysis was performed using the following settings: heuristic search, 1000 random starting trees, 1000 iterations of tree-shrinking, and 1000 iterations of tree-building. The results of the analysis are presented in Table 2.

the 1990s, the number of people in the world who are under 15 years of age is expected to increase from 1.1 billion to 1.5 billion. The number of people aged 65 and over is expected to increase from 200 million to 400 million. The number of people aged 15 and over is expected to increase from 3.5 billion to 4.5 billion. The number of people aged 15 and over is expected to increase from 3.5 billion to 4.5 billion. The number of people aged 15 and over is expected to increase from 3.5 billion to 4.5 billion.
